What is CSS?

What is CSS?

Cascading Style Sheets

```
body {  
  font: x-small;  
  background: #  
  color: black;  
  margin: 0;  
  padding: 0;
```

What is CSS?

CSS helps elements how to be displayed on the web.

CSS files are the external style sheets which consists of the styles for HTML file.

What is CSS?

```
JavaScript
<script type=
"text/javascript"
```

Behavior

```
CSS
<style>
Body {
  Color:...
  ul#mylist {
    font-family
  }
</style>
```

Presentation

```
HTML
<html>
<head>...
<body>
<h1>
<h2>
<p>...</p>
<ol><li><li>
```

Why Use CSS

Why Use CSS

CSS is used to style your web pages. Using CSS you will be able to put out pages with much less work, that load much faster, and will be easy to update and print!

CSS Syntax

CLARUSWAY
WAY TO REINVENT YOURSELF

Basic CSS rule consists of a selector, a declaration and a style.

Use of CSS

Table of Contents

- ▶ Inline CSS
- ▶ Internal CSS
- ▶ External CSS file
- ▶ Multiple Styles and Cascade Rule

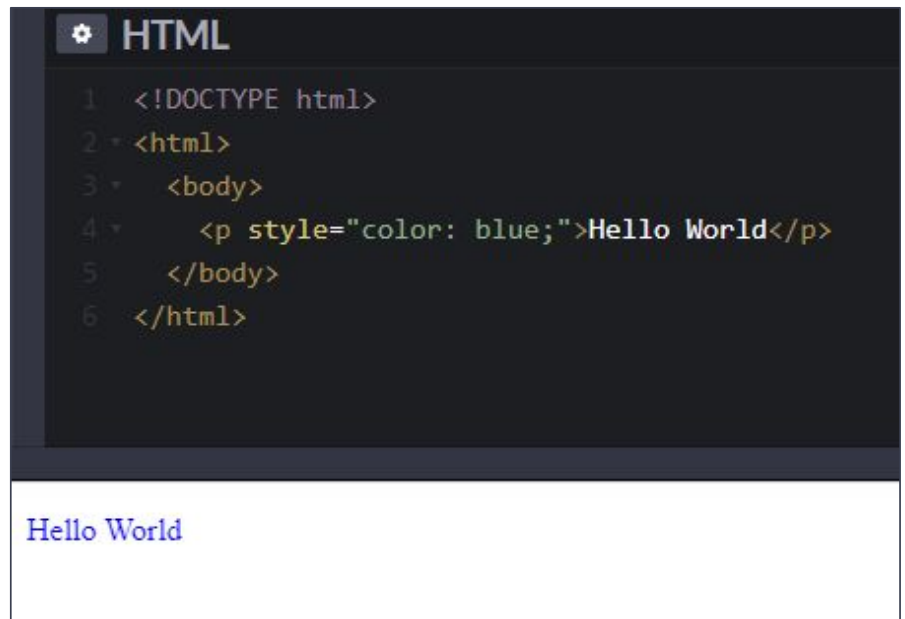

17

Inline CSS

Inline CSS

For any single element in the HTML file can have inline styles. For inline styling, the **style** attribute is used.

```
HTML
1 <!DOCTYPE html>
2 <html>
3   <body>
4     <p style="color: blue;">Hello World</p>
5   </body>
6 </html>
```

Hello World

Internal CSS

Internal CSS

For any single HTML file, internal styles can be used. The internal styles are written inside the **<style>** section of the HTML page.

```
HTML
1 <!DOCTYPE html>
2 <html>
3 <head>
4 <style>
5   body {
6     background-color: yellow;
7   }
8   p {
9     color: blue;
10  }
11 </style>
12 </head>
13 <body>
14 <p>Hello World.</p>
15 </body>
16 </html>
```

Hello World.

External CSS file

External CSS file

* The styles can be located in a different file, so with an external style sheet, the design of the website can be changed from this file.

* To include an external stylesheet, `<link>` element must be used as a reference to the external style sheet in the `<head>` section of the HTML page.

```
HTML
1 <!DOCTYPE html>
2 <html>
3   <head>
4     <link rel="stylesheet" type="text/css" href="file.css">
5   </head>
6   <body>
7     <p>Hello World.</p>
8   </body>
9 </html>
```

Multiple Styles and Cascade Rule

Which style has the lowest priority in CSS

Students choose an option

25

Multiple Styles and Cascade Rule

- * All styles which are applied to the same element will apply in the **cascade** order of rules.
- * Inline styles have the top priority, then external and internal style sheets and finally browser default styles. So, an inline style will override external and internal styles and browser defaults.

Multiple Styles and Cascade Rule.

- * In the **external style sheet**, color of **<p>** is defined as **red**.
- * In the **internal style**, color of **<p>** is defined as **blue**, and in the **inline style green**, where the **browser default** is **black**.
- * In this example, the color of **<p>** element is **green** because of cascade rules.

```
HTML
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <link rel="stylesheet" type="text/css"
     href="file.css">
5   <style>
6     p {
7       color: blue;
8     }
9   </style>
10 </head>
11 <body>
12   <p style="color: green;">Hello World</p>
13 </body>
14 </html>
```

Hello World

The Box Model

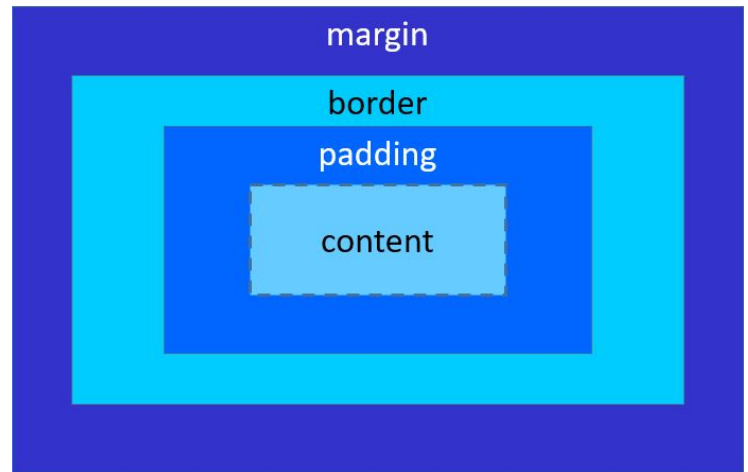

The Box Model

All elements in HTML file is considered as boxes. The "Box Model" term is used to describe box that surrounds an element. It consists of: margins, borders, padding, and the content.

- * **Content:** The content of the box.
- * **Padding:** A transparent area around the content.
- * **Border:** A border that around the padding and content.
- * **Margin:** A transparent area around the border.

CSS Selectors

CSS Selectors

- **CSS selectors** are used to select HTML elements.

CSS Selectors

CSS element Selector

- An element selector uses element name to select the HTML element.

```
HTML
1 <!DOCTYPE html>
2 <html>
3 <body>
4 <p>Hello World</p>
5 </body>
6 </html>

CSS
1 p {
2   color: red;
3 }
```

Hello World

CSS Selectors

CSS id Selector

- The id selector uses id attribute to select the element in HTML file.
- The id of an element must be unique in a page. A hash (#) character is used to select an element with a specific id.

The screenshot shows a code editor with two panels. The left panel, titled 'HTML', contains the following code:

```
1 <!DOCTYPE html>
2 <html>
3 <body>
4 <p id="text1">Hello World</p>
5 </body>
6 </html>
```

The right panel, titled 'CSS', contains the following code:

```
1 #text1 {
2   color: red;
3 }
```

Below the code panels, a preview window shows the text 'Hello World' in red.

35

CSS Selectors

CSS class Selector

- The class selector uses class attribute to select all elements of that class in HTML file.
- A period (.) character is used to select elements with a specific class.

The screenshot shows a code editor with two panels. The left panel, titled 'HTML', contains the following code:

```
1 <!DOCTYPE html>
2 <html>
3 <body>
4 <p class="error">Hello
  World</p>
5 </body>
6 </html>
```

The right panel, titled 'CSS', contains the following code:

```
1 .error {
2   color: red;
3 }
```

Below the code panels, a preview window shows the text 'Hello World' in red.

36

CSS Selectors

Universal Selector

- The universal selector (*) selects all HTML elements on the page.

The screenshot shows a code editor with two panels: HTML and CSS. The HTML panel contains the following code:

```
1 <!DOCTYPE html>
2 <html>
3 <body>
4 <h1>Hello World</h1>
5 <p class="error">Hello
  Clarusway</p>
6 </body>
7 </html>
```

The CSS panel contains the following code:

```
1 * {
2   color: blue;
3 }
```

Below the code panels, the rendered output is shown. It features a large blue heading "Hello World" and a smaller blue text "Hello Clarusway".

CSS Comments

CSS Comments

- The browser does not display comments, but with comments, we can place warnings, descriptions and other notes.
- CSS Comments can add the text between `/*` and `*/` characters.

`/* Single-line comment */`

`/* This is a
Multi-line comment */`

THANKS!
